

## How To Use SVG Files

### Cricut / Silhouette

1. Download your file onto your computer or device.
2. Locate the download in your computer's downloads folder and upload it into your cutting software (cricut / silhouette). SVG is best.
3. In your software you can re-size, stretch, rotate, add text, change colors and design your image to suit your project.

**Silhouette:** [https://www.youtube.com/watch?v=H-I3Fu\\_9zAM](https://www.youtube.com/watch?v=H-I3Fu_9zAM)

**Paint** (free editing software – Windows): <https://www.youtube.com/watch?v=QiHTbsxaB7I>

**Apple's Photos** (free editing software – Mac): <https://www.youtube.com/watch?v=YPxgJE-dOyk>

### Printing your file

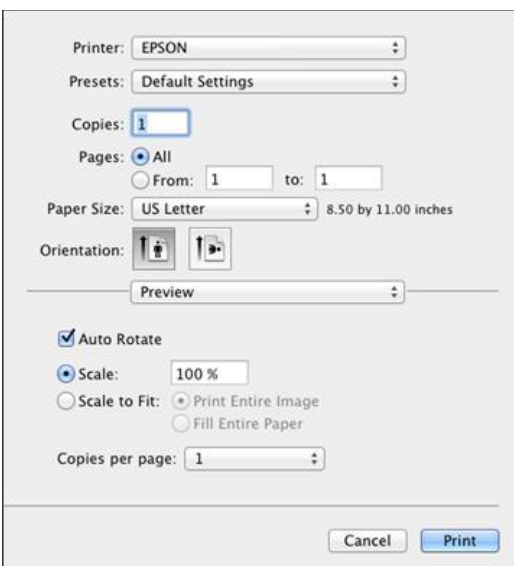

All digital files come with a set size, which is provided in the listing description. If you would like to change the size:

#### **WINDOWS:**

Click print and then choose the size you want from “photo size” and then make sure under “fit” you have “shrink to fit” selected. If you need a more specific size, you’ll need to edit your photo in a photo editing software first (see above).

#### **MAC:**

Click print and then choose the size percent you want from “Scale”. If you need a more specific size, you’ll need to edit your photo in a photo editing software first (see above).
